1  ---
2  layout: post
3  title: Benefits of static site generators
4  date: 2016-01-19 12:00
5  author: Jana Bergant
6  image: http://placeholder.it/900x300
7  lead: "We pay a huge price for the underlying complexity of dynamic code running on a server for
      every request – a price we could avoid paying entirely when this kind of complexity is not
      needed."
8  category: jekyll
9  subtitle: Create a ultra fast, secure blog that is easy to mantain and easy to scale
10 ---
11
12 Some of the benefits of a static website generators are that they are:
13
14 - Simple - makes building and maintaining websites incredibly simple, Static sites are
      easier to maintain (No databases, No server-side scripts!). Use static website generators when
      you're after simplicity and want to put the emphasis on the content, which is what you should be
      doing. It doesn't really matter, whether you're focusing on hosting a huge website, or a simple
      portfolio, static websites can be extremely useful when it comes to saving money, time and
      resources.
15 - Fast: Static files can be served fast. There is no database or templating layer that slows
      requests down. Additionally, web servers will automatically set caching headers (such as Last-
      Modified) for static files, which reduce bandwidth usage.
16 - Secure, as they do not contain dynamic content, so are immune to the most common attacks.
      Considering the only thing being served to users' devices are HTML, CSS and Javascript files
17 - Have versioning - Storing content in flat, text files, makes them ideal to be used with
      version control systems, such as Git.
18 - Utilizing a static site generator means you can build websites with modern frameworks and
      workflows, with a high degree of productivity and efficiency
19 - Uses markdown
20 - Previewable: Because static sites are developed locally, you can play around with the site
      to your heart's content without affecting the live site.

```

Relative posts from the post's category

```
{% for category_name in page.categories limit:1 %}
```

```
{% endfor %}
```

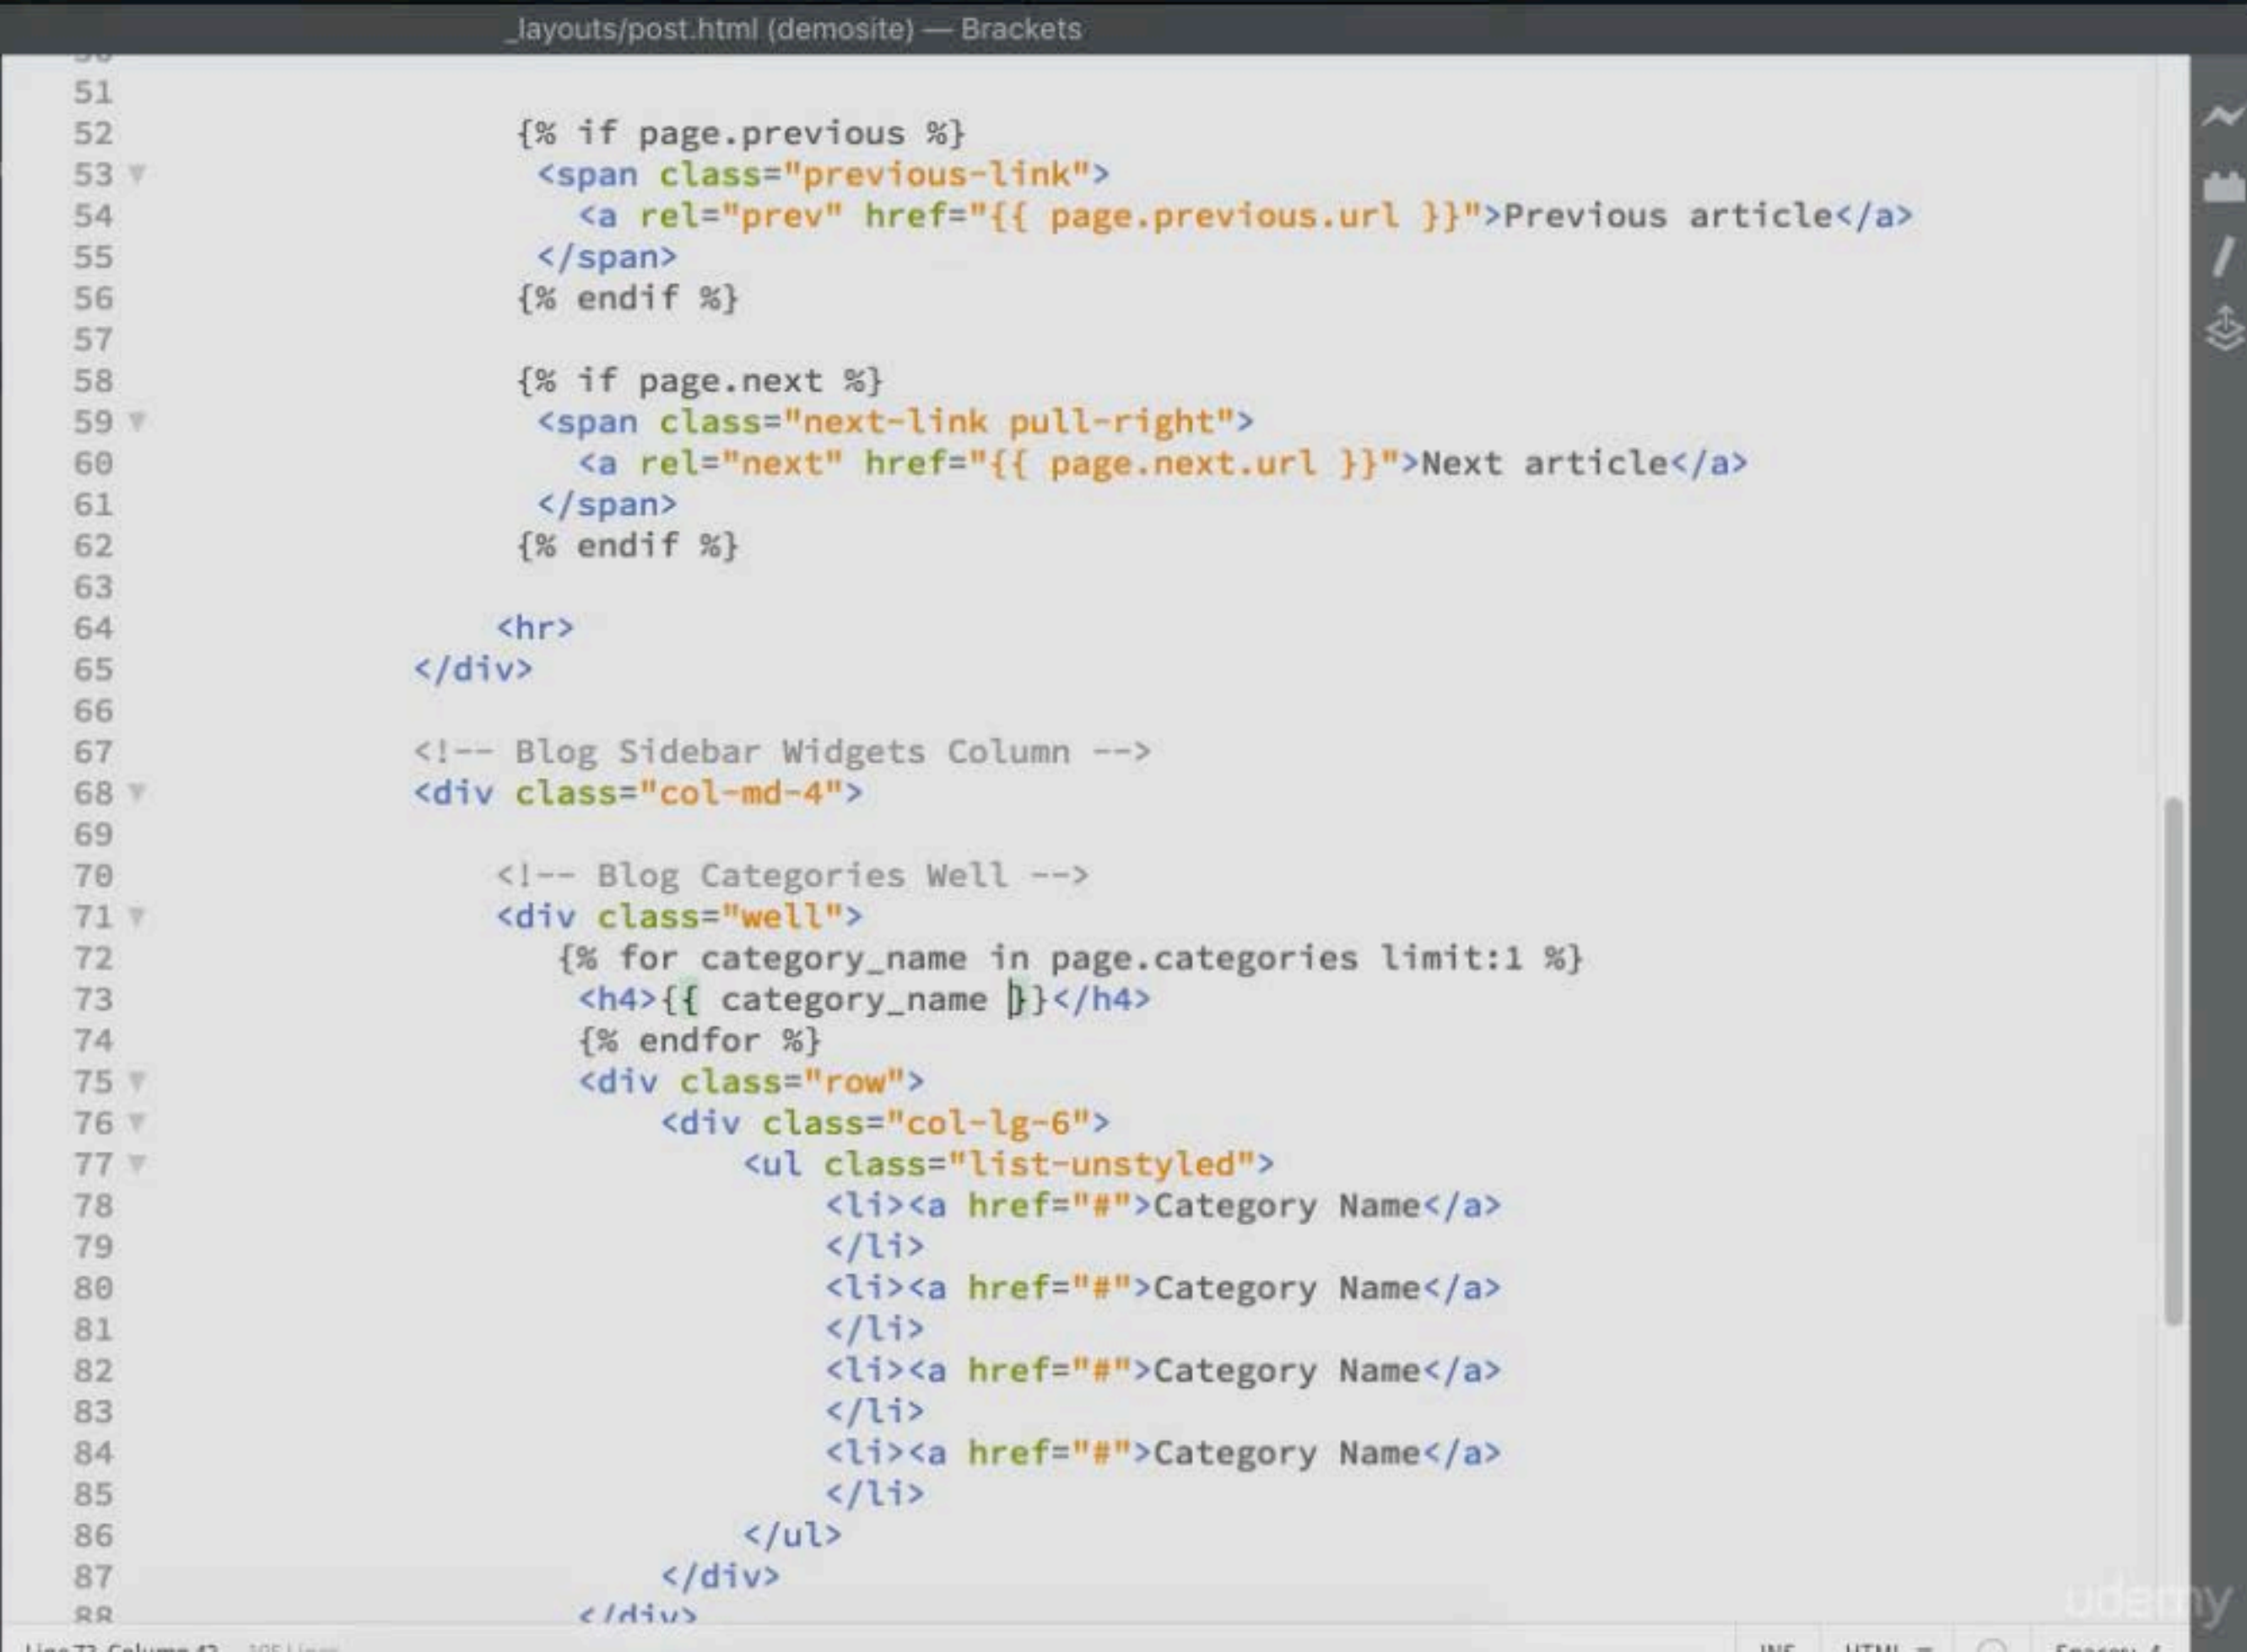

```
{% for category_name in page.categories limit:1 %}
```

```
